

Verification Statement	
Client Name: Spirax Sarco Project No.: CS19/01	

Mr. Richard Hidersley
Group Energy Manager
Spirax Sarco.

VERIFICATION STATEMENT

This statement confirms that Spirax Sarco has commissioned TÜV UK to carry out the verification process according to ISO 14064-3:2006 – Specification with guidance for the validation and verification of greenhouse gas assertions.

It has been assured that the verifier is truly independent from Spirax Sarco and/or agents related to the calculation of the GHG information. A conflict of interest checklist is presented in the annex of the verification report.

Verification is implemented to refine and improve the robustness of GHG data and to confirm controls and processes supporting the greenhouse gas assertion are robust. The verification encompasses Spirax Sarco's global operations. Other objectives are:

- To confirm that the GHG assertion is in conformance with ISO14064-1 and is without any material discrepancies.
- To comply with the Mandatory Green House Gas Legislation, which was enforced in the United Kingdom on the 1st October 2013.

By means of document review and a verification audit carried out by TÜV UK at three of Spirax Sarco's sites; it is verified that Spirax Sarco within the chosen boundary meets the requirements of ISO 14064-3:2006. Based on the information provided and applying best practice guidance the materiality threshold was set at 5% of the assertion. During the site visits historical data was reviewed covering the calculations carried out for Scopes 1 and 2 GHG emissions and was used to support the GHG Assertion as made by Spirax Sarco.

Acting as an independent Certification Body, TÜV UK has verified the greenhouse gas emissions of the company for the reporting period

1st January 2018 to 31st December 2018 (inclusive)

Verification Statement	
Client Name: Spirax Sarco Project No.: CS19/01	

to be

19,563 tCO₂e for Scope-1, and 20,446 tCO₂e for Scope-2

Considering all relevant and significant GHG sources.

In conclusion and based on the audit carried out and the GHG assertions made, TÜV UK confirms that based on the procedures conducted, nothing has come to our attention, **to a limited level of assurance**, that causes us to believe that Spirax Sarco's GHG assertion is not, in all material respects, in accordance with ISO14064-3:2006.

London, 14-02-2019

Tanya Kuchukova

Head of Certification

TÜV UK LTD (Member of TUV NORD GROUP)
